SUGGESTIONS FOR AUTUMN PLANTING

U. S. Department of Agriculture.

Large trees save many years of waiting.
Maple on grounds of Mr. F. Von Beren,
Westville, Conn., three months after
transplanting.

Elm City Nursery Co

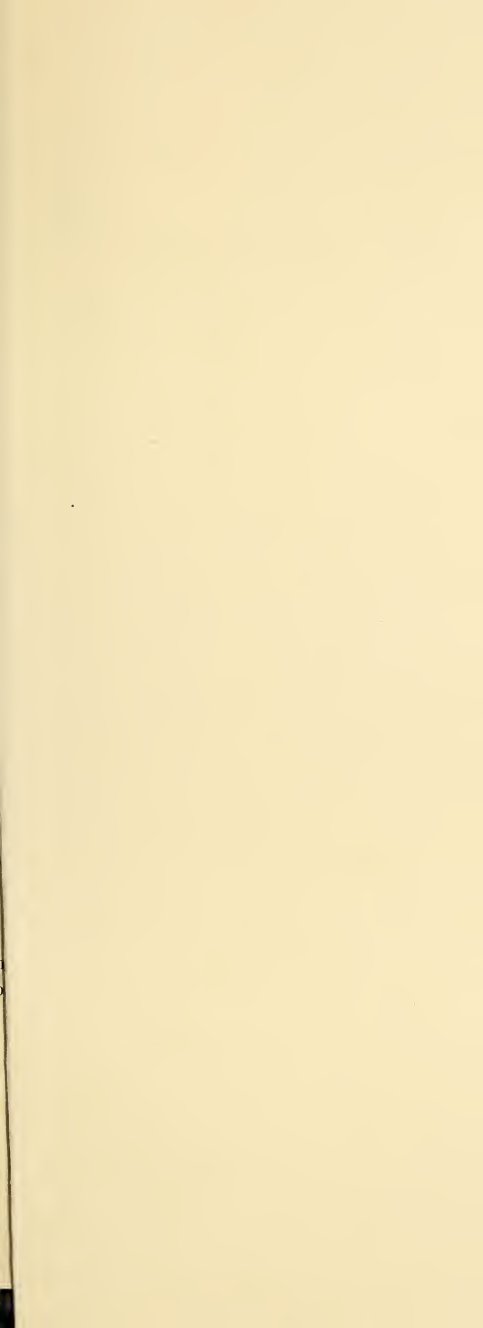

ANNOUNCEMENT

**MR. ERNEST F. COE IS RETIRING FROM
THE ELM CITY NURSERY COMPANY, AND WILL
DEVOTE HIS TIME, IN THE FUTURE, TO
LANDSCAPE-WORK**

**OFFICE AFTER OCTOBER 15TH
951 FOREST ROAD
NEW HAVEN, CONNECTICUT**

**THE ELM CITY NURSERY COMPANY'S LANDSCAPE
DEPARTMENT IS IN NO WAY INFLUENCED BY
MR. COE'S RETIREMENT**

FRUIT TREES AND SMALL FRUITS

FRUIT TREES, large and small. We have all sizes. For those who want fruit in the shortest time possible, there are transplanted sizes, five to twelve years old, which saves many years of waiting.

Among these are some choice varieties of Dwarf Apples, many actually producing fruit in the nursery row.

Write or phone us size of plot to be planted and we will give you list of available varieties and sizes.

Strawberry plants are now ready, both pots and layers. Leading varieties, including best everbearing sorts. Potted plants will produce a good crop next season.

Prices

Potted	\$6.00 per 100
Layers	3.00 per 100

Raspberries, Blackberries, Gooseberries, Currants and Grapes. All are well suited to Autumn planting.

HEDGE PLANTS

In addition to the usual line of hedge plants, we now have ready for distribution, two absolutely new plants of finest character.

IBOLIUM PRIVET

This new introduction of ours meets every requirement of the individual who seeks a luxuriant Privet hedge that can be kept closely trimmed. Not only just as good as the so-called California Privet, but really superior, fills out better at the ground and will not winter-kill in this climate.

PRICES

One year old plants, mostly single stem	15 to 18 in.	\$15.00 per 100
Two year old plants, well branched	18 to 24 in.	\$25.00 per 100

BOX-BARBERRY

The ideal plant for edging formal gardens and borders, and especially well suited for a low lawn hedge for the small lot. This plant is rapidly taking the place of Boxwood, is absolutely hardy, dainty and attractive. When close trimmed, grows compact from the ground up.

PRICES

Two years,	6 to 8 in.	\$20.00 per 100	\$150.00 per 1000
Three years,	8 to 10 in.	\$30.00 per 100	\$250.00 per 1000
Four years,	10 to 12 in.	\$40.00 per 100	\$350.00 per 1000

Box-Barberry used for edging walk in formal garden at Red Banks, N. J.

LARGE TREES AND EVERGREENS

WE are now consolidating our interests at Woodmont, and have, on our tracts in Westville, many trees larger than the usual planting sizes which are being offered at greatly reduced prices, giving you the opportunity to possess a tree of large dimension at little more than an average size tree would cost you. These trees consist of Maples, Oaks, Ash, Sycamores, Elms, etc., and a number of trees of rarer varieties.

For those who desire Evergreen varieties, we are also fortunate in having a large number of choice trees.

Such effects as these are obtained by using the larger sizes of trees.

How we carry out your Landscape Developments

Attractive landscape effects do not happen spontaneously, but are the result of careful study and forethought. Do not leave your landscape problems to careless and inexperienced men.

Careless planting is the most expensive planting in the end, and results in delayed effects, poor arrangement and often a loss of many valuable plants.

Grounds of
Donald G. Tuttle
Naugatuck, Conn.

Planned and planted by our Landscape Department.
Pictures taken two years after first plantings
were made.

Results obtained by a carefully worked out landscape plan

WHEN we receive a request from you regarding proposed landscape work, an appointment is made for one of our thoroughly experienced landscape developers to visit your property and consult with you concerning your wishes, where all phases of the problem are considered.

In many cases it is not necessary to proceed with a written report or working drawings, for we can give the information desired by verbal instructions, notes and sketches prepared during the visit. If the problem is more complex, involving extensive plantings, we either make our own survey or leave it to your engineer to furnish us with the proper data. A preliminary study is then made and tentative sketches supplied for your consideration. After such changes as seem necessary are made, the general plan is then completed with working drawing and specifications carefully prepared, giving entire list of material to be used and approximate cost of labor. If so desired, we are prepared to give a contract price on the entire development.

During construction and planting, the work is under the direct supervision of the landscape developer who prepared the plans, thus insuring a thorough interpretation of the original idea.

We consider it a pleasure to offer suggestions, without charge, to intending purchasers, but where landscape problems require special visits, plans, reports, specifications, etc., a reasonable charge is made, consistent with services rendered.

SAVE TIME BY PLANTING IN EARLY AUTUMN

The above picture represents the first housing unit built by the Bridgeport Housing Co. The entire planting of this work was done by us in the early Autumn of 1916. In the rear of these buildings is a combined length of over three-fourths of a mile of Privet hedge, the planting of which was begun the middle of August.

EARLY AUTUMN PLANTING ASSURES ABUNDANT SPRING FLOWERING EFFECTS

This picture shows the effectiveness of planting Paeonies and Iris together.

Paeonies and Iris

No two herbaceous perennials have become more popular in the last few years than Paeonies and Iris. Both of these perennials have been so highly developed that one now has a choice of many varieties. The flowering effect is not alone to be considered, inasmuch as the foliage of both Paeonies and Iris remains effective throughout the season.

All skillful gardeners plant Paeonies and Iris in the Autumn.

An effective mass planting of Rhododendrons. Country home of Mr. W. F. Porter, Woodbridge, Conn.

Rhododendrons are one of the few all-the-year-round plants. Their handsome broad-leaved foliage makes them not only effective through the winter months but their blossoms give an added attraction during the summer season. In many cases, Rhododendrons solve the problem of plantings for the north side or other shady locations. No one class of plants can be more easily and safely transplanted in the early Autumn.

Herbaceous Perennials

No time of the year assures better results for planting perennials than does the early Autumn. Plants set out this season of the year will form a generous root system and attain a firm foothold in the ground before the winter months set in. This is the ideal season for overhauling the perennial border or garden.

Rose Pergola. The central feature in the garden of Mr. B. C. Warner, Stratford, Conn.

Roses—What home is complete without its bower or bed of roses. Years of experience has taught us that early Autumn planting of Roses gives excellent results. Roses planted at this time, when well cut back and mulched heavily, will produce an abundance of flowers the following season. We have a fine selection of Roses now ready. Make your selections early, while our assortment of varieties is complete.

A block of evergreens at our Woodmont Nurseries, which have been many times transplanted and every plant a specimen.

A block of Norway Maples at our Woodmont Nurseries. No finer grown trees than these can be found in the United States.

ALL BUSINESS TRANSACTED AT OUR NEW HAVEN OFFICE (Edgewood Avenue)
